Barnes 2.0 out of 5 stars When I reset the calculator it worked just fine. So now I take back all my ugly thoughts about Canons product and have my trust restored. LOL The price is affordable and I do expect to get my moneys worth and more. Just remember the reset button on the back if you have a problem.After less than 5 months with usage maybe a few times a day, this Canon LS100TS calculator is completely dead. Despite having solar power, leaving it on the windowsill for a day failed to get any response from it. Id send it back, but the cost involved both in postage and effort is more than this calculator is worth. I thought Canon was a reliable brand one of the factors in my choosing this calculator but apparently not in this case. Waste of money choose something else.

Even with excel on two computers, I find the frequent need to hammer out a quick calculation and I needed something I could use quickly that the buttons were large enough to easily hit with my finger. This calculator fits the bill exactly! Its a calculator and it gets it job done. I do like the button, give you a feeling that you are actually typing on a hard keyboard. But this one is not what I was looking for, just the feel of it is not what I wanted. But for a basic calculator it will work fine for you. Dont hesitate to buy this one. I first purchased a dollar store calculator and regretted it every minute until I purchased this Canon calculator as a replacement. The keys are not sticky, the screen is sufficiently bright the calculator uses both solar and battery power, and the calculator provides up to 10 digits which is important if youre dealing with any calculations involving millions and want to include 2 decimal places. It also has basic tax and business calculations, although I havent needed to use those on a regular basis. Dont hesitate to buy this one. Its well worth the price. If youve found this review to be helpful, please consider hitting the Yes button below Sorry, we failed to record your vote. Please try again Malheureusement, la qualite ne semble pas la meme que sur les modeles plus anciens de la meme marque. Les touches oscillent et lorsque je tape trop rapidement, des frappes ne sont pas enregistrees. Je dois donc verifier constamment ce que je viens de taper afin de massurer que toutes les touches sont bien inscrites a lecran, je ne peux tout simplement pas faire confiance au resultat affiche. Je finis par tout calculer en double afin de massurer que le resultat est le bon, une vraie perte de temps. Sorry, we failed to record your vote. Please try again Good for income taxes, square roots, 10 digit across the whole screen. I was buying cheap calculators, at dollar stores, and they kept breaking down.

I got very upset, I knew Canon is a renown maker of electronics, and his little gem works awesome. For the price and fast shipping, it was at my door, in no time. Runs on battery, and when the battery, eventually runs out, it runs on solar too. Very satisfied! Sorry, we failed to record your vote. Please try again Apart from that is a very satisfactory tablet however camera is not suitable for keen photographers who probably would never consider using any table for taking photos, Sorry, we failed to record your vote. Please try again Have used it twice and it no longer turns on. It was to help my child with their grade 4 homework. Even the solar power does not work. I have never experienced this before with canon products. Very disappointing! Sorry, we failed to record your vote. Please try again I like it because it is easy to use. Tried many calculators before and this model is the best. But it was dead due to nothing shown on the screen. This time I decided to buy the same model. Sorry, we failed to record your vote. Please try again Im used to scientific calculators, but the tax functions are new to me and had to seek help elsewhere. Still a nice calculator! Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again So far its math is better than mine. Sorry, we failed to record your vote. Please try again Very pleased with the purchase as feedback from coworkers using this have been great! Sorry, we failed to record your vote. Please try again Does what it says and does it well. Digits on display are easily read. Stays put on desk top without sliding around. Sorry, we failed to record your vote. Please try again Product arrived on time and works fine. The keys do make some noise when you press on them. That is my only complaint. Sorry, we failed to record your vote.
